DISCHARGE SUMMARY

HISTORY AND HOSPITAL COURSE:

This patient was admitted Dr. Mohammed Al-Qattan on 10 January 2015 for left radial club and centralization. This patient is a 4-year-old boy, a known case of bilateral radial club and hypoplasia of bilateral thumbs. The patient was scheduled for centralization of both hands in March 2013, but it was canceled due to increased bleeding profile. Hematology team was consulted at that time and was followed up in the clinic as the patient was stabilized. So, the patient was admitted electively for centralization of the left hand only. The patient was admitted and the operation was done on 12 January 2015 with no complications. The patient was investigated and all were normal. The patient was kept under observation for a couple of days and we discharged the patient on 12 January 2015 with no issues. For more information, please refer to the operative note.

DISCHARGE MEDICATION:

Acetaminophen and cefuroxime for 2 weeks.

FOLLOW-UP APPOINTMENT:

The patient was given a 2-week appointment.
