Visit #: OP0000149358

Report Code: 4F0F438A

MEDICAL REPORT

Patient's Name: ROLIN MATER OTAIF

M. File No.: 1326400

Visited the hospital on: 05 Sha'ban 1445 (15 February 2024)

Date: 08 Mar 2024

Nationality: SAUDI

Sex: F **Age:** 5Y

CLINICAL PRESENTATION: The patient is a 5-year-old Saudi female who was complaining of limitation of right forearm supination and pronation that affect the daily activities. The position of the forearm in pronation causes difficulty during washing the face and eating.

INVESTIGATIONS: X-ray showed proximal radioulnar synostosis.

DIAGNOSIS: Right proximal radioulnar synostosis.

TREATMENT/RECOMMENDATIONS: The patient might need derotational forearm osteotomy to correct the position of the forearm.
